DELFOR/Schedule version 2.6

Functional profile of Odette DELINS V4R1
Based on Edifact DELFOR D96A.

PROCESSING OF DELIVERY SCHEDULE BY THE RECIPIENT.

The processing must be such that the delivery schedule included in a message is kept up to date for the entire parts assortments per material control unit at Scania.

The recipient can not be guaranteed delivery schedules on fixed dates.

A received delivery schedule shall, as soon as possible update the previous delivery schedule.

The information in Schedule shall be re-used in the DESADV/AVIEXP and Transport Label.

Non-significant zeros and blanks in data strings should be suppressed. However, if alpha-numeric field contains leading zeros for some data and the same data occurs in EDI-messages and/or transport labels and/or on accompanying documents then the leading zeros must occur in all instances. In such a case the leading zeros are to be looked upon as being significant.

When the values in the NAD+SE and NAD+MF are different, both values are used. Both values shall be used in DESADV/AVIEXP and INVOIC/INVOIC messages.

No packaging information is given in the DELFOR message.

Scania is not working with cumulative quantities.

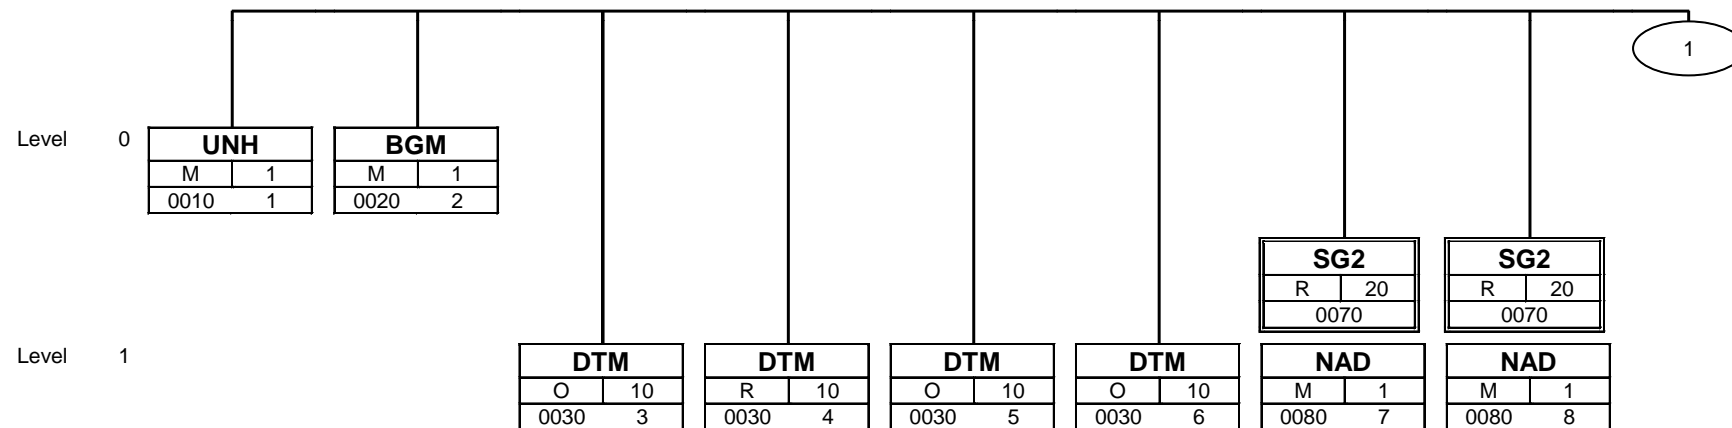

Previous Despatch Notes, Scania gives information on received goods only.

The delivery instruction completely replaces the previous instruction for the updated horizon period. However deliveries specified for dates outside the horizon period remain valid in the new instruction. By using the effective from date/time coded and effective to date/time coded attributes in the message header entity, the horizon is valid for all articles in the message. This procedure can also be used for cancellation of schedules (i.e. when no deliveries are present for the specified period). As one quantity to be delivered is required per scheduled article, in this case, one quantity with the value "0" should be given. Replacement is the recommended method within the automotive industry.

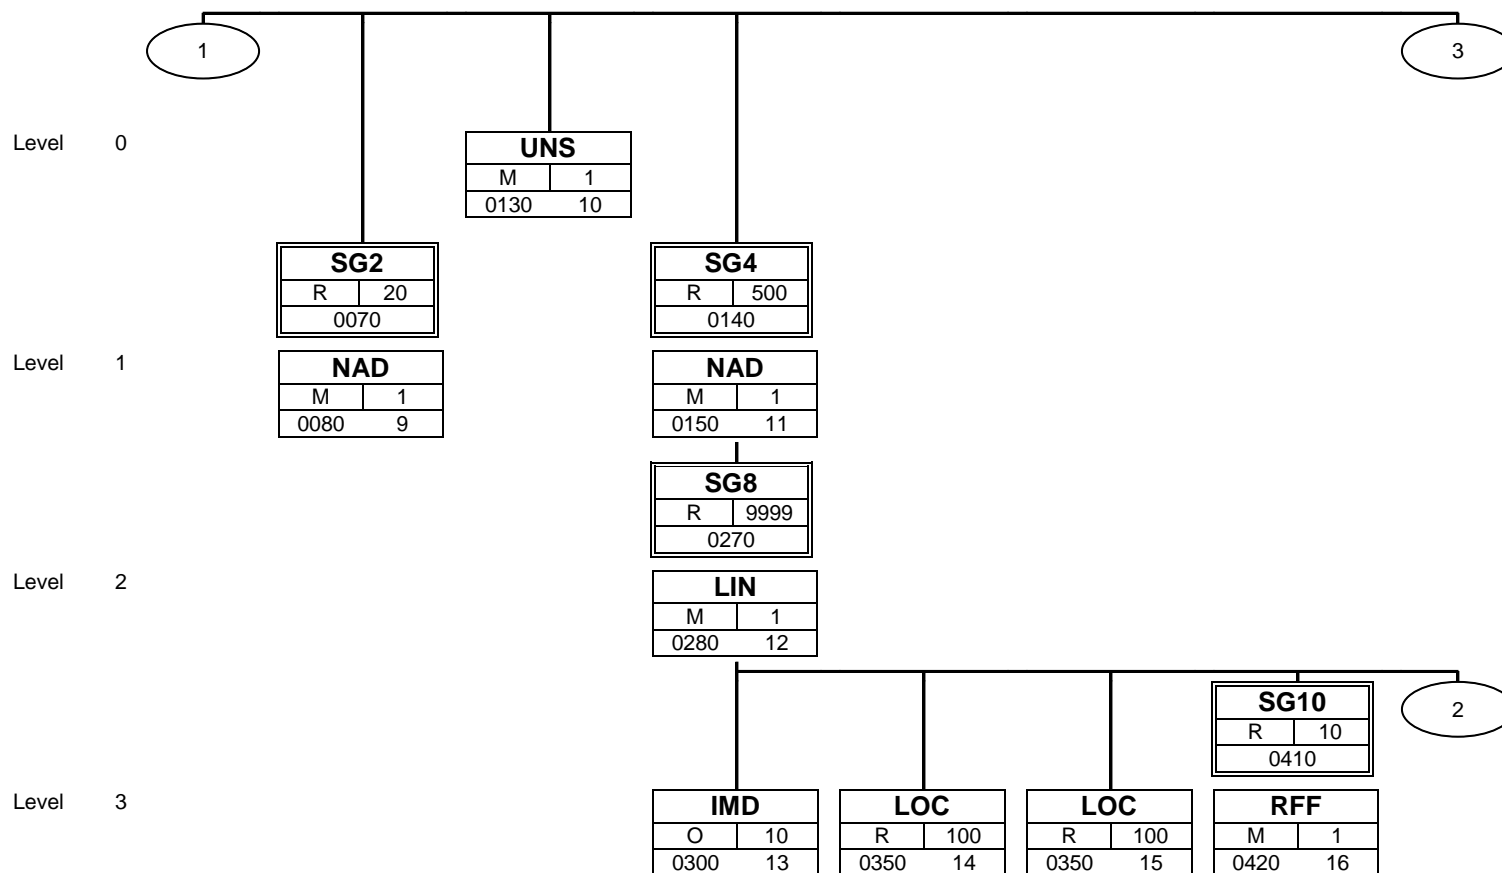

The updated horizon period is defined at message level with effective from and effective to dates are valid for all articles (*Effective To Date/Time* can only be used with *Effective From Date/Time*).

The replacement case is identified by the code value 3 (replacement) in the attribute.
