Scania AVIEXP version 2.2

**Functional profile of Odette AVIEXP V5R1 based on
Edifact DESADV D96A.**

PURPOSE OF MESSAGE AND BASIC FUNCTION

The purpose of the despatch advice message DESADV/AVIEXP is to provide the final goods receiver with detailed information about actual contents of a consignment from the consignor.

One DESADV/AVIEXP corresponds to one consignment.

The DESADV/AVIEXP is based on the fact that a *consignment* is defined as a certain quantity of goods despatched from a certain consignor to a certain consignee on the one and same occasion.

One or more consignments can be loaded physically on a vehicle but one consignment must not be divided amongst several vehicles. A certain consignment is always to be kept together when carried from consignor to final consignee. In practice, *a consignment corresponds to one DESADV/ AVIEXP*.

DESADV/AVIEXP RELATED TO DELIVERY NOTE

The contents of the delivery note must correspond to the DESADV/AVIEXP. However, the DESADV/AVIEXP contains more detailed information than the delivery note.

The Despatch Advice Number and the Consignor's Identification Number must be clearly stated on the delivery note and on the way-bill.

CREATE AN DESADV/AVIEXP

The contents of a DESADV/AVIEXP shall reflect the real contents of the consignment. Transmission of the message must not take place before the time that the consignment leaves the consignor (supplier).

The supplier is obliged to ensure that the DESADV/AVIEXP reaches Scania well in advance of the goods arriving at Scania. At all times the supplier must be capable of submitting the DESADV/AVIEXP within one hour of the consignment leaving the consignor.

DESADV/AVIEXP sent too late will cause the same problem at the goods reception at Scania as when a DESADV/AVIEXP is not sent at all.

Information should automatically be taken from DELFOR/DELINS, instead of using hard coded information from supplier's systems.

Non-significant zeros and blanks in data strings should be suppressed. However, if alphanumeric field contains leading zeros for some data and the same data occurs in EDI-messages and/or transport labels and/or on accompanying documents then the leading zeros must occur in all instances.

In such a case the leading zeros are to be looked upon as being significant.

BATCH NUMBER

When batch information is required by Scania the following is very important:

- The batch information shall be given in segment GIR (BX), first the cast code than the cast number with a blank in between (e.g. 32 123456). When there is no cast code, set a hyphen (-) then a blank and the cast number (e.g. - 123456).

-
- For a consignment that contains parts with different batch number, a new CPS loop has to be created for each batch number.

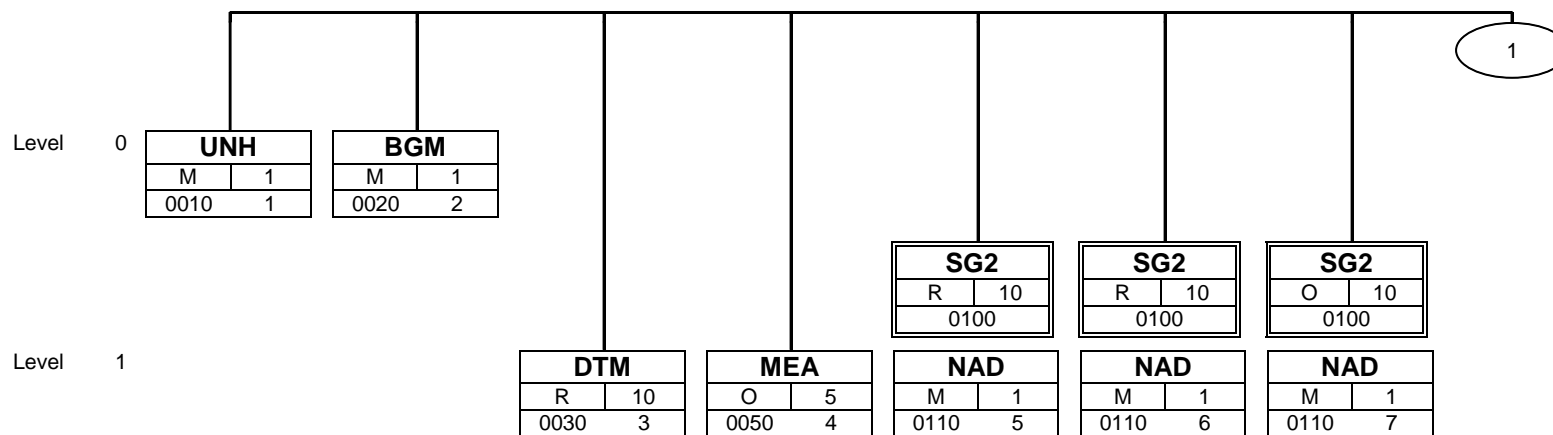

KANBAN CARD NUMBER

When Kanban method is used the following is very important:

- For a consignment that contains parts with different Kanban card numbers, a new CPS loop has to be created for each Kanban card number.

PACKING AND GOODS LABEL INFORMATION

The packing and goods label information in the DESADV/AVIEXP should correspond to the physical consignment. For information on how pallets and boxes shall be packed and labelled can be found in Scania packing manual and Transport label specifications.

				1 = Inner

Comment:

The CPS segment has to be repeated for each article number in LIN segmnet. According to restrictions owing to the the different structure in Edifact compared with odette, a CPS loop can only contain one batch number. If the same article is delivered with different batch numbers the whole loop srting with CPS ha to be repeated.

Example:

CPS+1+++1 '
